

# User Experience Wireframes

## Flow

On first launch, the user is asked to allow the app to use location services and regardless of the result, the login page comes up. From there, there is a button that takes the user to a registration page, where they can create an account if they are a new user. Once created, they can log in, and are taken to the landing page, where they can see their current and future itineraries, or a prompt to create a new one, assuming they are new to the app. As the day passes and an event on their current itinerary comes up, the user gets a notification informing them of the event, and after it has passed, they can rate the event in-app (also prompted by a notification). The menu on the top right allows the user to go to settings and sign out. To create a new itinerary, the user has to press the plus icon on the top left of the landing page, which takes them to enter details about their trip. They can move forwards and backwards to modify the contents of the pages and change the itinerary they get. A user can change the event as well as see more details about it by tapping on the event in any itinerary. Once they are happy with the itinerary, they are taken back to the landing page, and depending on the date, the itinerary becomes the current one, or a future one.

## Account Registration

The image displays two mobile app screens for account registration. Both screens have a status bar at the top showing signal strength, Wi-Fi, and the time 17:32. The left screen shows the 'Create An Account' form with the following fields: First Name, Last Name, Username, Password, and Repeat Password. Below the fields is an orange 'Sign Up' button. At the bottom, there is a link to 'Already have an account?'. The right screen shows the same form but with error messages: 'Username already in use' for the Username field, 'Password too weak' for the Password field, and 'Password does not match' for the Repeat Password field. The 'Sign Up' button is still orange.

## Sign In

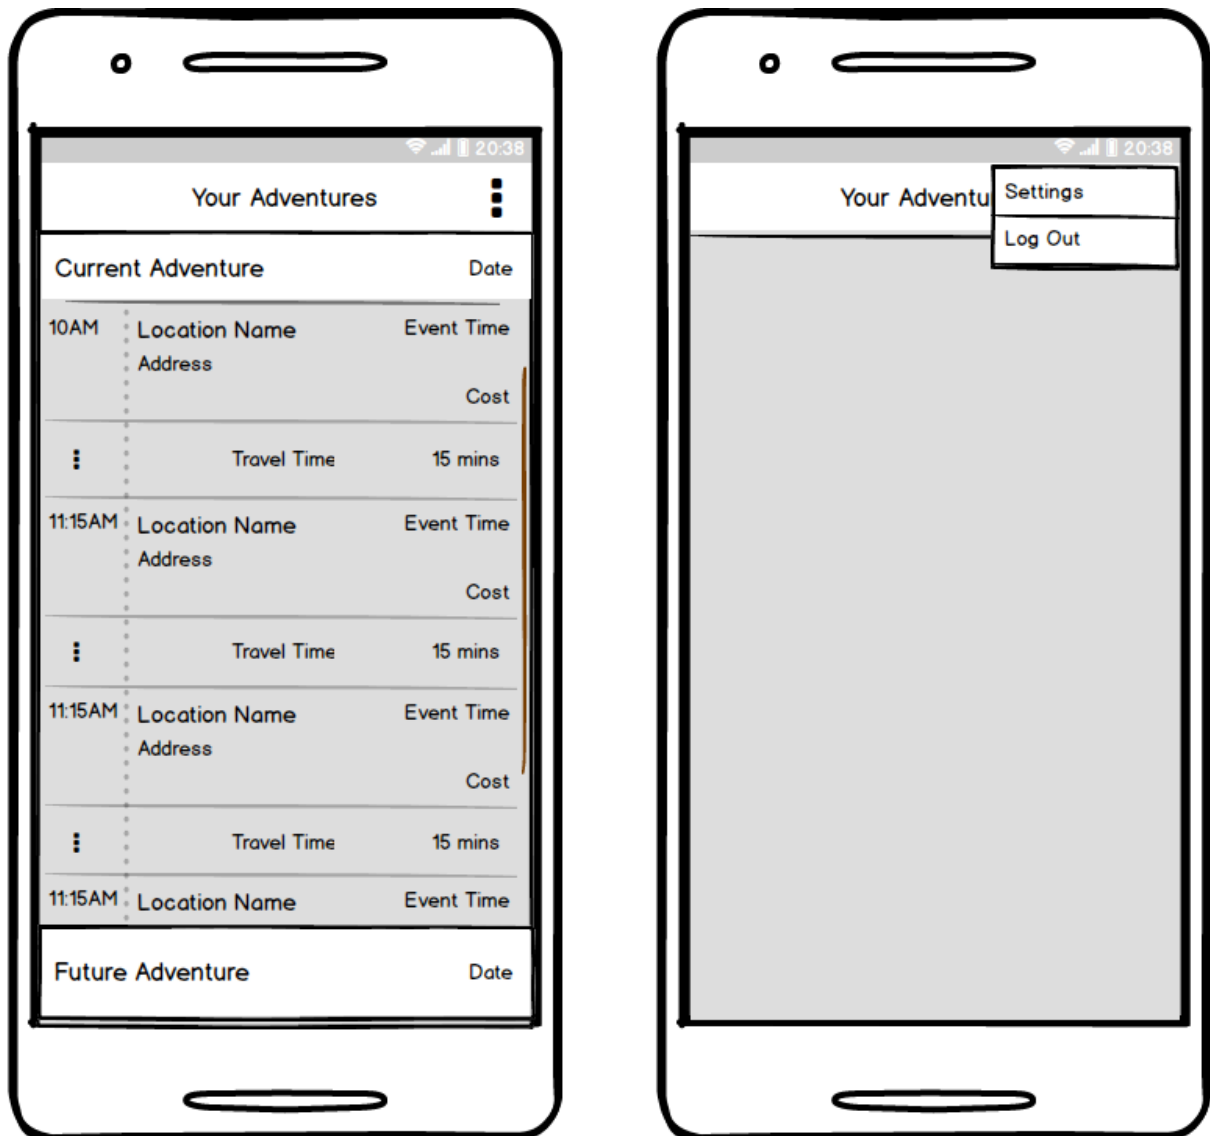

A mobile app sign-in screen. At the top is a status bar with a signal icon, a battery icon, and the time 17:32. Below the status bar is a black circle icon containing a white map of the Americas. Underneath the icon is the text "Sign In". There are two input fields: "Username" and "Password". Below the "Password" field is an orange button with the text "Sign In". At the bottom of the screen is a white button with the text "Need an account?".

A mobile app sign-in screen, identical to the one on the left, but with an error message. Below the "Password" input field, the text "Username/Password Incorrect" is displayed in orange. The rest of the screen, including the status bar, icon, "Sign In" text, input fields, orange "Sign In" button, and white "Need an account?" button, is the same as the first screen.

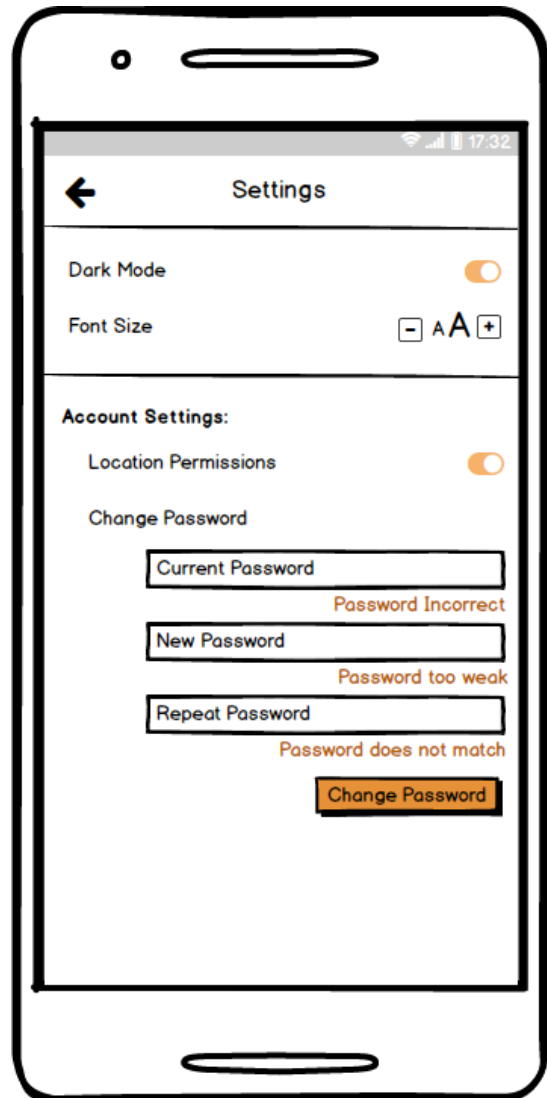

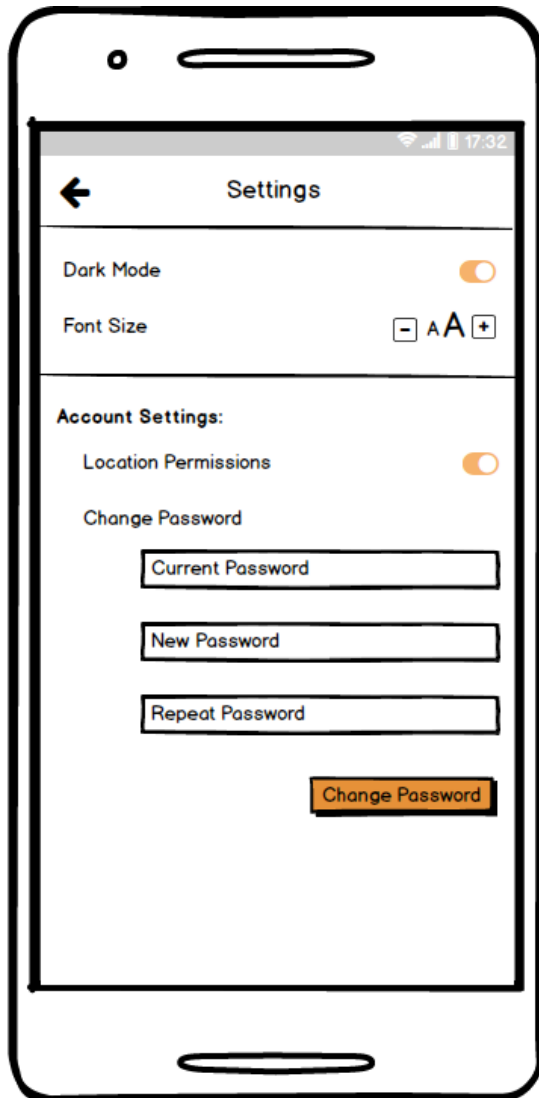

Sign in / log in.

## Landing Page

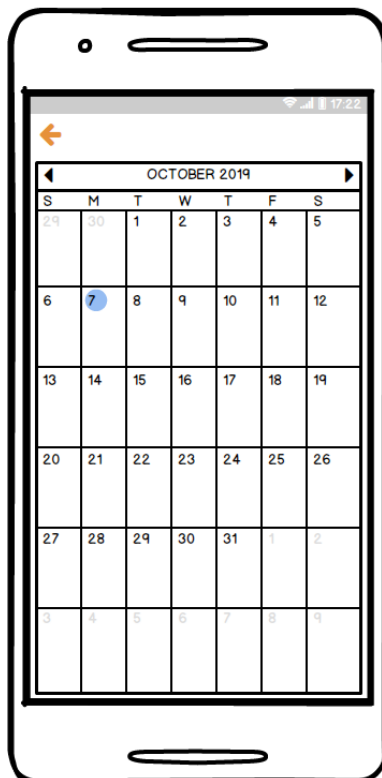

User is able to see the current itinerary and any future itineraries they have created when they log into the app.

## Account Settings

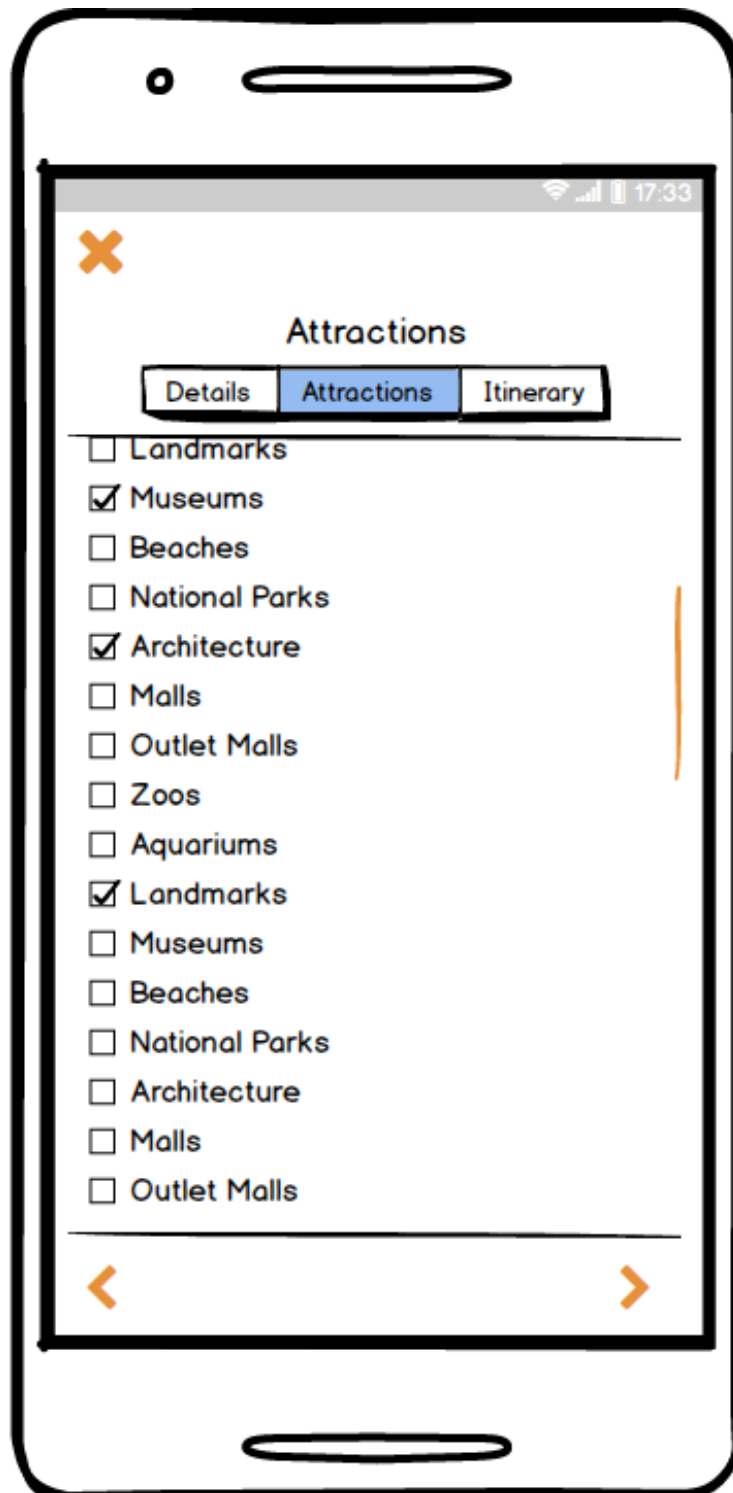

## Create New Itinerary: Details

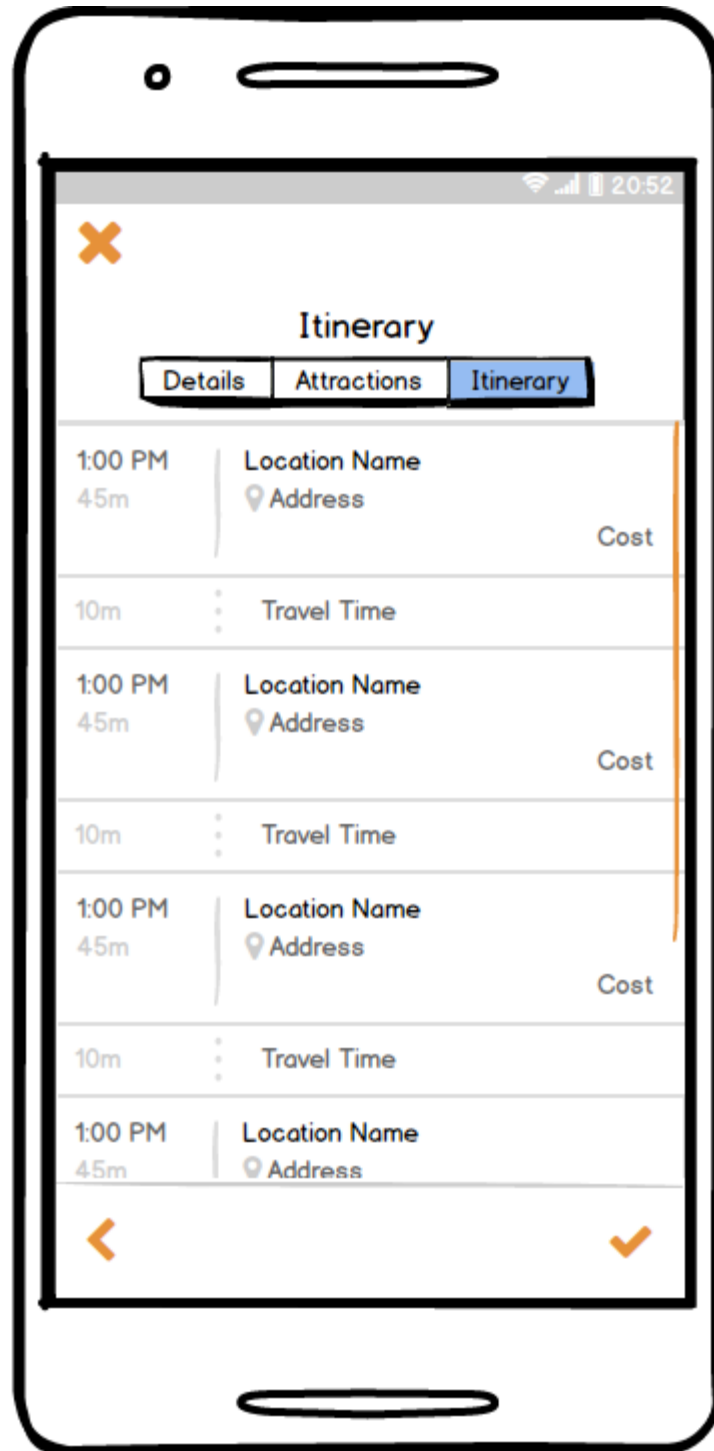

A mobile app screen titled 'Details' with a close button (X) in the top left. It features three tabs: 'Details' (selected), 'Attractions', and 'Itinerary'. Below the tabs are input fields for 'City, Country to Explore' (with a location pin icon and the text '(Or use current location)'), 'Date of Exploration', 'Time', 'Number of People', and 'Budget'. A 'Transport' section includes radio buttons for 'Walking' (selected), 'Driving', 'Transit', and 'Uber/Lyft'. At the bottom, a 'Maximum Distance' slider ranges from 1 km to 50 km, with an orange arrow icon in the bottom right corner.

## Create New Itinerary: Attractions

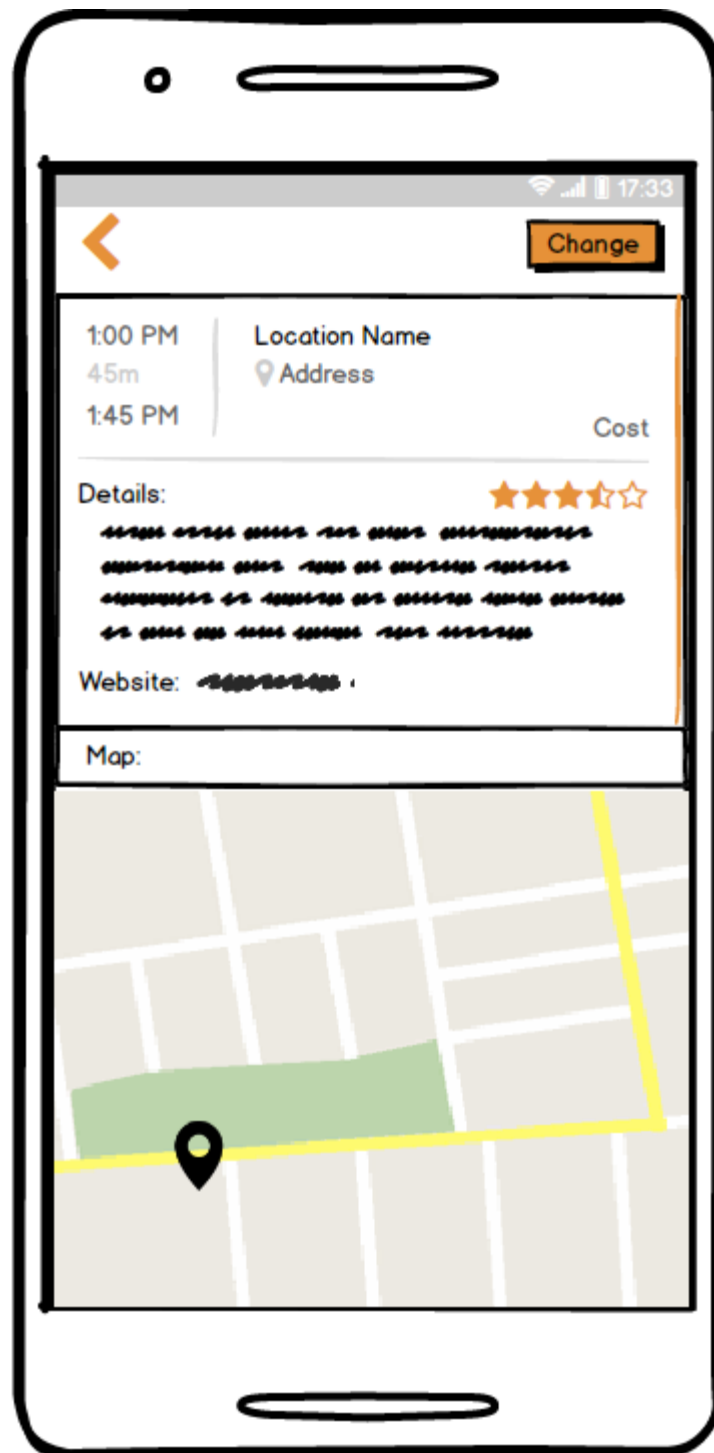

## New Itinerary

The newly created itinerary which users can check and tap on events to change. Tapping next closes the creation pages and the back arrow moves the user back to change options on detail and attractions.

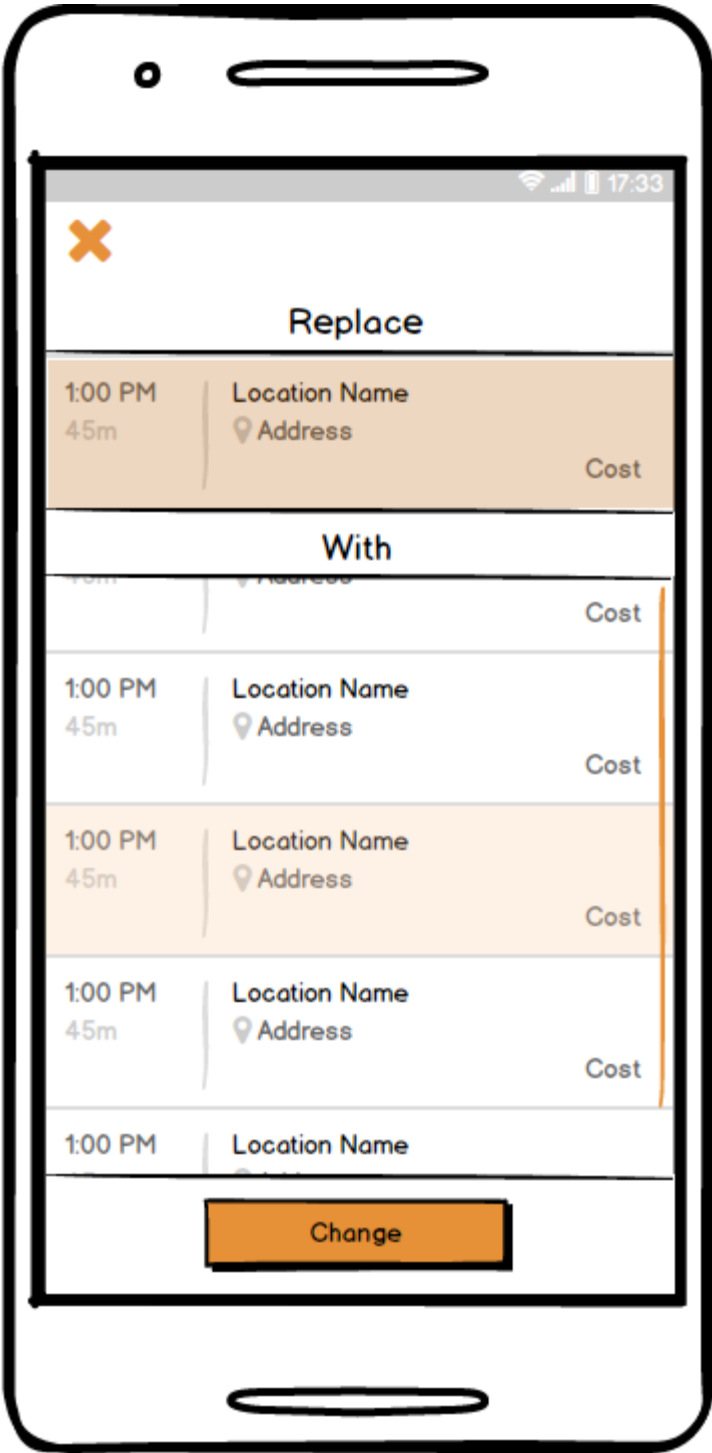

## Event Details

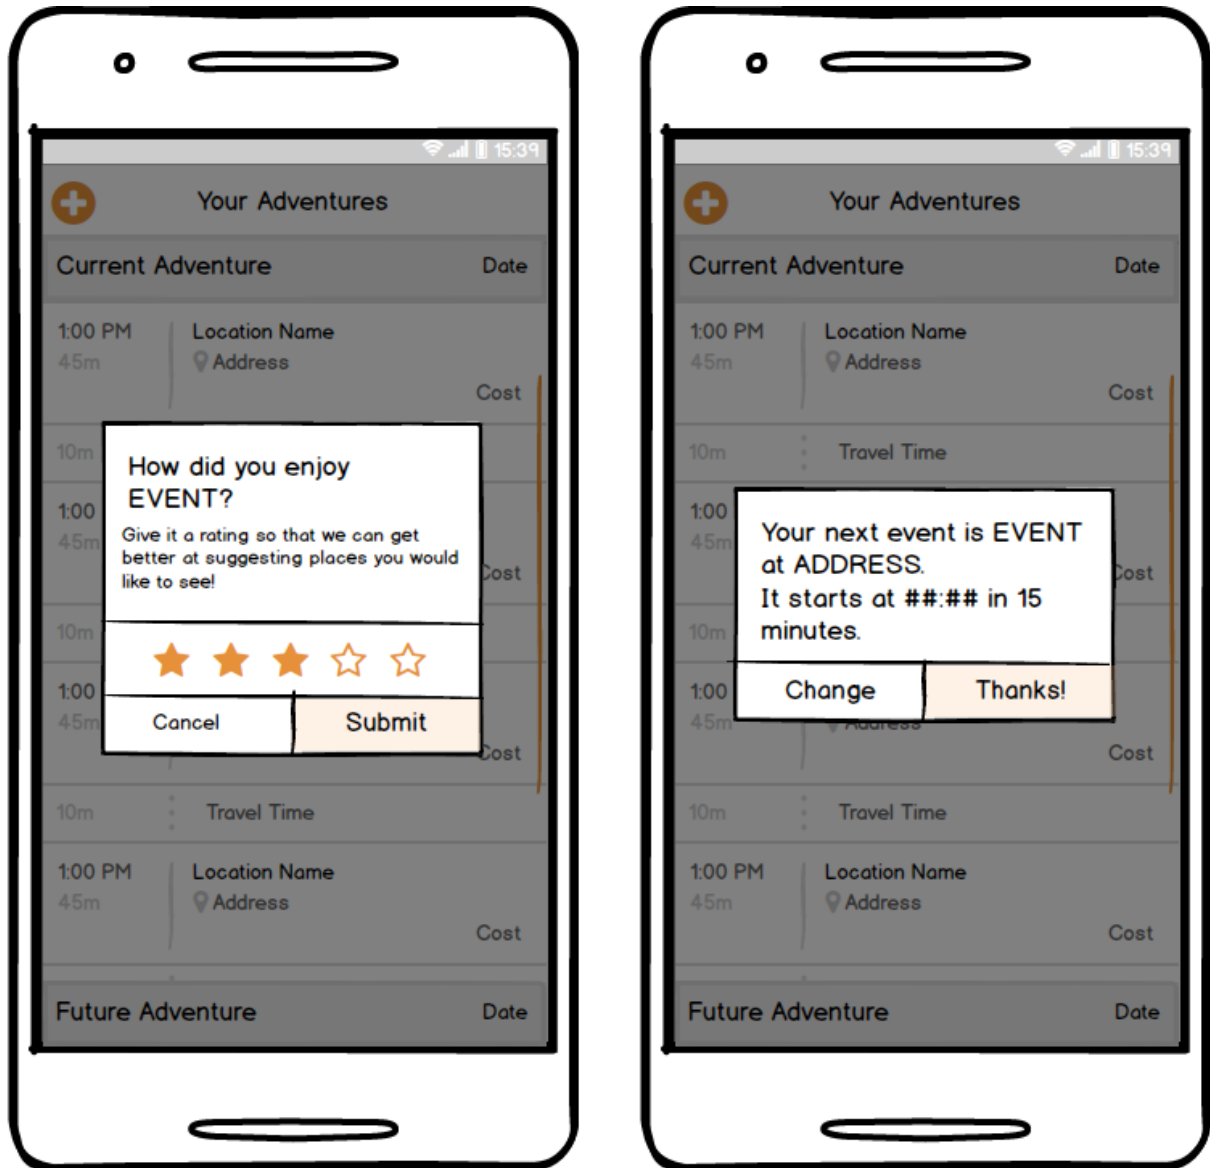

Detailed view of a single event in the itinerary.

Change Attraction

## Activity Rating and Next Activity Dialogues

Notification on phone after an event ends (so user can rate the event) and before the next even starts (to keep them updated).
